

Integration: SwipeClock HUB to Evolution Payroll

Synchronizing employee and payroll data between Evolution Payroll and all versions of SwipeClock HUB (HUBbasic, HUB and WorkforceHUB™)

Benefits for Employees, Employers and Providers

Employees

Providing employees with a unified, single sign-on experience with access to all things related to payroll and HR is rapidly becoming the expected standard for small and medium businesses. The HUB employee dashboard does just that with payroll and HR services delivered through a simple and intuitive interface. management, leave planning, and compliance.

Employers

Can easily manage employees, HR services and sensitive documents through the same interface.

Payroll Providers

Can automate the delivery of payroll information and pay related documents directly to employers and employees. Put information directly in the hands of those that need it when they want it.

How Integration Works

Evolution's Virtual Mail Room (VMR), Scheduled Reports and EVO Exchange

The SwipeClock HUB integration uses different Evolution technologies for different purposes. Here's an overview of each and how they support information flow and synchronization between the two systems.

Virtual Mail Room

VMR is used to securely delivery the Evolution Check Stub Detail report via secure email to HUB. HUB's intelligent parsing algorithm pulls out individual employee pay stubs for access via HUB and optionally delivers alerts to the employee (via text or email) with net pay and direct deposit amounts.

SwipeClock Middleware

SwipeClock middleware synchronizes data between Evolution and HUB using custom Evolution reports and EVO Exchange.

Evolution Data to SwipeClock

Evolution reports (.rwr) specifically created for HUB are scheduled to generate CSV extracts. These extracts are read by SwipeClock middleware which utilizes HUB's API set to keep data in sync. Synchronized data include: Earnings, Payroll Schedule, Departments (groups), and Employees.

New/Changed Employee Data to Evolution

New hire and employee change data is updated through the middleware which retrieves changes (address, W4, direct deposit) via the HUB API and creates import files used by EVO Exchange to add new hires and keep employee changes in sync.
